

PaperLess technology enhances ISL's ERP product range

PaperLess Europe have announced that they are to supply their electronic document flow and archiving software to Msida-based Information Systems Ltd (ISL), who can now roll out this enhancement with their enterprise resource planning (ERP) systems throughout Europe, Africa and the Middle East.

Thanks to this technology partnership, users of the EYESEL Business Suite will benefit from an integrated system that is secure and reliable, enabling them to improve their business efficiency, save money, increase profits and reduce risk. PaperLess Europe's technology will integrate seamlessly into ISL's comprehensive ERP system, making ISL's end users also PaperLess Europe's end users.

Phil Richards, Business Development Manager at PaperLess Europe's Sliema office, explained that PaperLess only works through carefully selected business partners. The integration of the two in-house technologies allows PaperLess to concentrate on developing its products while ISL focuses on looking after their end customers.

For Joe Aquilina, Business Development Director at ISL, the benefit of the partnership is that ISL has added a new product which customers will benefit from in terms of efficiency, cost-effectiveness and, most importantly, document management and storage.

Commenting on the new exciting business partnership with ISL, Mr Richards said: "It is a great pleasure to partner with ISL, whose industry leading ERP system is designed and developed here in Malta. Working with the professional team here, we are confident that customers who are looking for efficiency improvements, time saving and risk reduction will find exactly what they need from PaperLess integrated with the EYESEL Business Suite."

Mr Aquilina agreed: "We are delighted to be partnering with PaperLess Europe, which will give our local and overseas clients, users of the EYESEL Business Suite, added value and a new unique selling proposition, especially when they realise how much they are going to gain from this enhancement."

PaperLess Europe was set up in Oslo, Norway, in 1997 with the vision of improving the efficiency of accounting systems by using electronic document flow and archiving. With an expanding base of 1,700 installations using PaperLess technology in Europe, in 2012 PaperLess made a strategic decision to move its headquarters to

Malta, with offices in Norway, while expanding new territories in the United Kingdom, the Netherlands, and Ireland.

ISL's primary goal is to deliver comprehensive solutions that meet every business need. Since its launch in 1994, ISL has helped a variety of satisfied clients in diverse industries, including the automotive sector, food and beverage distribution, project management and services, offering customers superior quality by providing cost effective and efficient business solutions.
